‡ Adjustment of rated and maximum torque specifications for load fluctuations is not required.
However, if operating temperature exceeds 30°C, please adjust rated torque and maximum torque as follows:

Air Temperature:	-20°C to +30°C	+30°C to +40°C	+40°C to +60°C	+60°C to +80°C
Temperature Correction Factor:	1.00	0.80	0.70	0.55

Materials

Hub: Aluminium A2017.
Anti-vibration Rubber: HNBR.
Cap Screw: Steel SCM435 Black Oxide Coating.

Performance

Operating Temperature Range: -20°C to +80°C Approx.
Volume Resistance: 10¹²-10¹³ Ωm.

Extras

Stainless Steel Capscrews. Bore and keyway modifications available on request.

Other Info

Excellent resistance to aging, weathering, ozone, light oil, alcohol, water, strong alkali and low concentration organic acid.
Excellent vibration absorption and electrical insulation.
High torque single piece structure with anti-vibration rubber moulded between two hubs. For use with servo motors and stepper motors.
Identical clockwise and counter-clockwise rotational characteristics.
Recommended tolerance for shaft diameters is h6 and h7.
Split coupling for easy attachment and removal.
